EXAMINER'S AMENDMENT

Since all claims previously withdrawn from consideration under 37 CFR 1.142 have been rejoined, the election of species requirement made in the Office action mailed on 12/10/04 is hereby withdrawn. The limitation in the allowable generic claim of the cutters being fixed to the tip of the tong member by an elastic clamp, which is fixed to the tong member by a fixture through a latch hole is present in all of the independent claims.

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with applicant's representative, Mr. Charles E. Baxley, on February 4, 2005.

The application has been amended as follows:

Page 6, line 17, "member" has been changed to --member disposed at the end of the tong handles--;

Page 7, lines 9, 11, 12, 13 and 15, "20" has been deleted;

Page 7, line 14, "a working section" has been deleted;

Art Unit: 3724

Page 8, lines 3 and 7, "20" has been deleted;

Page 8, line 2, "being" has been changed to --is--.

The following is an examiner's statement of reasons for allowance: The claims define a hole puncher comprising a pair of tong handles that have cutters, which are removable from the tip of the tong member, wherein the cutters are held in place by an elastic clamp that is fixed to the backside of the tip of the tong member by a fixture through a latch hole. Harmon (645,927) teaches a hole puncher comprising a pair of tong handles that have cutters, which are removable from the tip of the tong member, but does not teach the cutters held in place by an elastic clamp. Balback (5,327,652) teaches a hole puncher comprising a pair of tong handles that have cutters, which are removable from the tip of the tong member, but does not teach the cutters held in place by an elastic clamp. Burger (6,178,844) teaches an object that is being held by an elastic clamp, but does not teach a hole puncher, and does not teach an elastic clamp that is fixed to the backside of the tip of the tong member by a fixture through a latch hole. Peterson (4,505,058) teaches a cutter that is being held by an elastic clamp, but does not teach a hole puncher, and does not teach an elastic clamp that is fixed to the backside of the tip of the tong member by a fixture through a latch hole. It would not have been obvious to use the references in combination with other prior art teachings to meet the claim limitations.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
